

## Assignment -1

### Python Programming

Assignment Date	23 October 2022
Student Name	S.Dhanachezian
Student Roll Number	510419104021
Maximum Marks	2 Marks

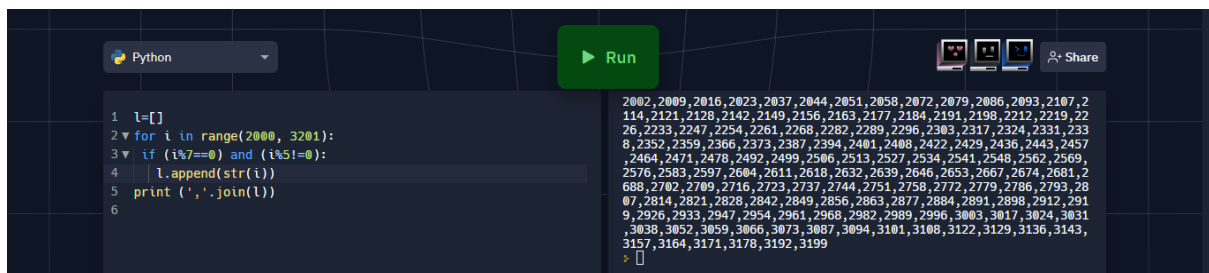

#### Question-1:

Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line.

#### Solution:

```
l=[]
for i in range(2000, 3201):
    if (i%7==0) and (i%5!=0):
        l.append(str(i))

print(','.join(l))
#-----#
#-----#
```

The screenshot shows a Python IDE with a dark theme. On the left, the code editor contains the following Python code:

```
1 l=[]
2 for i in range(2000, 3201):
3     if (i%7==0) and (i%5!=0):
4         l.append(str(i))
5 print(','.join(l))
6
```

On the right, the output window displays a long list of numbers, separated by commas, which are the results of the program. The numbers start with 2002 and end with 3199. The output is truncated with a scroll bar on the right.

### Question-2:

With a given integral number  $n$ , write a program to generate a dictionary that contains  $(i, i*i)$  such that  $i$  is an integral number between 1 and  $n$  (both included). and then the program should print the dictionary.

Suppose the following input is supplied to the program:

8

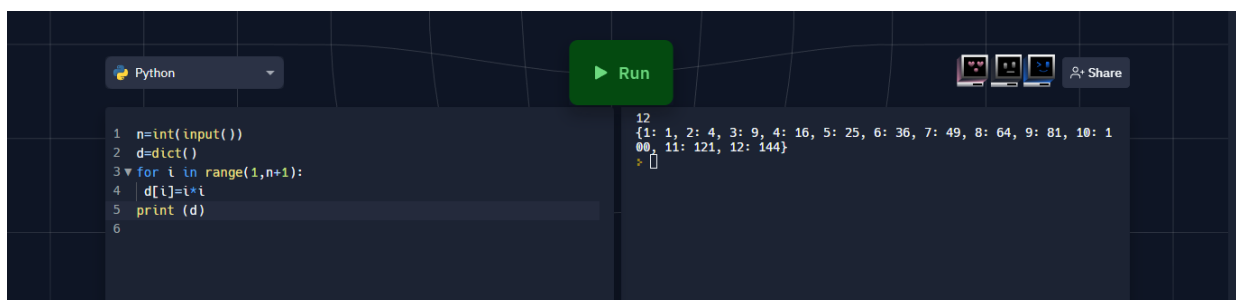

Then, the output should be:

{1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64}

### Solution:

```
n=int(input())
d=dict()
for i in range(1,n+1):
    d[i]=i*i

print d
#-----#
#-----#
```

The screenshot shows a Python IDE with a dark theme. On the left, the code editor contains the following Python code:

```
1 n=int(input())
2 d=dict()
3 for i in range(1,n+1):
4     d[i]=i*i
5 print (d)
6
```

On the right, the output console shows the result of running the code with input 8:

```
12
{1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64, 9: 81, 10: 100, 11: 121, 12: 144}
```

The IDE also features a 'Run' button and a 'Share' option in the top right corner.
